shading efficiency

Transmittance is the amount of light and heat transmitted beyond the fabric. The lower the amount, the greater the efficiency.

Block/reflect is the amount of heat and light that is blocked or reflected. The higher the amount, the greater the efficiency.

Absorption is the amount of heat and light absorbed in the fabric. The higher the amount, the lower the efficiency.

Ultraviolet protection illustrates how protective the fabric is against ultraviolet rays. The higher the amount, the greater the effectiveness.

this fabric is GREENGUARD certified as a low emissions product suitable for indoor use.

dart fabric

Dart fabric is designed for areas where a high level of light exclusion is required along with exceptional performance characteristics. The flame retardant fibreglass composition with a PVC coating for easy cleaning, ensures this fabric is suitable for almost all applications. With 14 colours and the most advanced range of fabric widths available, fabric joins are kept to a minimum to assist in wastage, design and speed of fabrication. This fabric comes with a full Biosafe® accreditation due to the anti-microbial properties of the fabric which inhibit the spread of bacteria, which has been tested under stringent conditions.
