

YewdaleKestrel® SafeDoor 2

Sleek modern design only
9mm thick and curved

Crib 7 fire rating
BS 5852:2006

Single or double
sided print

Fabric is reinforced
by fibreglass

Seams are welded and sewn
for added security

Features:

Although the SK SafeDoor 2 may look different, it is backed by the same safety features as our original SK SafeDoor, with a number of enhancements. This load release anti-ligature en-suite door continues to use our trusted load release magnets for guaranteed break away, whilst offering additional benefits including a higher fire rating and added defence against tampering.

Benefits:

For greater security and long-term durability, the SK SafeDoor 2 offers the added protection of welded and sewn pockets which keep the magnets secure and prevent tampering.

Improved fire retardant properties adhere to strict fire prevention guidelines (Crib 7 fire rating – BS 5852: 2006)

The SK SafeDoor 2 has an attractive curved profile that is just 9mm thick, making it lighter than our first SK SafeDoor. The soft foam door poses minimal risk of injury and greatly reduces the risk of the door being damaged.

The fibreglass material ensures the image is vastly improved, long-lasting and a lot harder to puncture. Maintains service user privacy and dignity whilst allowing observational checks.

Single or double-sided print available, facilitating the introduction of calming images on a durable, wipe-clean surface. Water-resistant materials that are ideal for en-suites. We offer a fast turnaround time of 5 to 7 business days.

Options:

- Self-closing patent-pending hinge
- Left hand or right-hand hinge mounted
- Colour/image of your choice
- Single or double-sided print

Specification:

The magnetic anti-ligature SK SafeDoor 2 for en-suites with vandal resistant, soft foam core. Manufactured from flame retardant fabric, constructed using anti-pick, tamper resistant materials, welded and sewn pockets, and incorporating Biosafe antibacterial formula to withstand vigorous daily use in hospital and mental health environments. The 4kg tear/stain resistant door is anti-static and will fall away from its magnetic fixing plates when subjected to a load greater than 9kgs.

O+M Guidance

It is an NHS requirement that items suspended on load-release support systems should be maintained and load-tested in accordance with the manufacturer's instructions on an annual basis. The SK system is maintenance-free and its performance remains constant even after repeated use. It is a requirement, however, to carry out a physical inspection and testing of YewdaleKestrel® fittings to identify any possible damage or evidence of tampering and undertake an annual load test. Annual testing should only be carried out by Protects Plus 0345 646 0955.

Safety Note

Sensitive electronic equipment may be damaged by proximity to a magnetic field and should not come within 150mm of the underside of the brackets. Any load-release device, by its nature, may cause damage when operated. Articles suspended from the SK magnetic anti-ligature system will come down when pulled.

SK products are designed as standalone products only. Care should be taken when assessing or arranging a room to ensure that SK products cannot be misused in conjunction with any other item, furniture or fixings in the room. It is the responsibility of the end user or client to ensure the product is suitable for the environment it is being installed in. SK products must be fitted by a qualified professional following the manufacturer's instructions. Failure to do so could jeopardise the product's effectiveness as an anti-ligature system.

Three year warranty as standard. SafeDoor 2 is excluded from the lifetime warranty.
